

## Straw Rocket - Student and Parent Support Page

This is a fun activity, but may take a bit of parent support to help with the design. Try and let students do as much as possible, only offering support and help as needed. You can see the design and launch video and instructions by clicking on this image (or going to <https://www.stem-inventions.com/straw-rockets>).

**Please note** - there are two changes from the video and website above.

1. The eraser is a bit too big for the straw and will need to be attached with a bit of tape.
2. The metal fastener that is used to “grab” the rubber band has a tendency to slip out of the tape. Your teacher has a design change that will help prevent that, but here are some pictures of the change.
